Stringer Edge Repair Tools

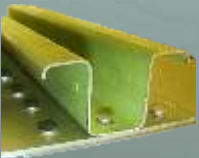

Bojo stringer repair tools have a narrow, ergonomic handle system specifically designed for this range. With straight or angled slots dimensioned to standard aerospace aluminum panels, these tools enable delicate alignment and repair to stringer edges without damage to anti-corrosion coatings.

These tools are also useful for general positioning, removal and handling operations when working with sheet materials, enabling a controlled degree of force to be applied, while protecting edges and equally important, technicians' fingers.

Currently 3 gauge sizes

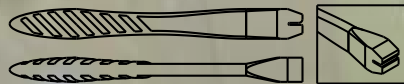

0.034" (0.860mm)

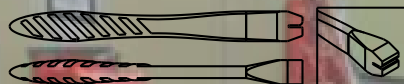

0.056" (1.42mm)

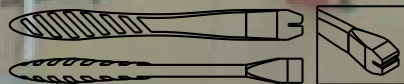

0.068" (1.72mm)

p/n sth-80-ungl
perfect for Edge sheet bending
