Center Cap Removal Tool

Original Equipment and Custom wheels often have removal slots to assist in prying off the center caps. Whilst it may be tempting to reach for the nearest screwdriver, the use of metal tools can cause unsightly damage to both the cap and the wheel.

Decorative paint finishes are easily marred, damaged plating eventually flakes leaving jagged edges. Whatever the outcome, the use of metal tools greatly reduces the life of cover plates and center caps, which are expensive to renew.

Bojo now offer a neat and effective solution to greatly reduce damage during wheel and cap removal operations. Our special 'Extreme Plastic' nylon composite tool, manufactured from high-spec. material is a must-have for both professional and home workshops, helping to keep cars looking 'factory fresh' for longer, maintaining both appearance and value.

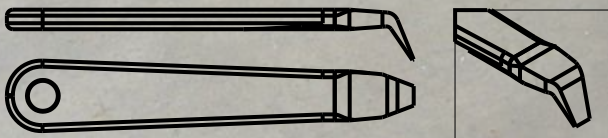

Fits most manufacturer's cap slot sizes

Greatly reduces likelihood of damaging paint and chrome on wheels.
